

1.ARITHMATIC

QUESTIONS 7 / 48 completed

Arithmetic

ARITHMATIC

Write a program to read in two integers and perform the following operations on them: addition, subtraction, multiplication, division, and modulo.

PROGRAM EDITOR

C++

Run

Save

```
1 #include<iostream>
2 using namespace std;
3 int main(){
4     int a=6,b=3;
5     cin>>a>>b;
6     cout<<"Addition="<<a+b;
7     cout<<"Subtraction="<<a-b;
8     cout<<"Multiplication="<<a*b;
9     cout<<"Division="<<a/b;
10    cout<<"modulo="<<a%b;
11    return 0;
12 }
```

OUTPUT

Addition=9Subtraction=3Multiplication=18Division=2modulo=0

2.AVERAGE

Average

AVERAGE

Write a program to read in three integers and compute the average of the three numbers. Use the assignment operator to store the result in a variable.

PROGRAM EDITOR

C++

Run

Save

```
1 #include <iostream>
2 using namespace std;
3 int main(){
4     int a=10,b=20,c=30;
5     float average;
6     cout<<"Enter first integer:\n";
7     cin>> a;
8     cout<<"Enter Second integer:\n";
9     cin>> b;
10    cout<<"Enter Third integer:\n";
11    cin>> c;
12    average=(a + b + c)/3.0;
13    cout<<"Average of the three numbers:"<<average;
14    return 0;
15 }
```

OUTPUT

Enter first integer:
Enter Second integer:
Enter Third integer:
Average of the three numbers:4.33333

3.COMPARE

Compare

COMPARE

Write a program to read in two integers and determine if they are equal or not.

PROGRAM EDITOR

C++

Run

Save

```
1 #include <iostream>
2
3 int main() {
4     int num1, num2;
5
6     std::cout << "Enter the first integer: \n";
7     std::cin >> num1;
8
9     std::cout << "Enter the second integer: \n";
10    std::cin >> num2;
11
12    if (num1 == num2) {
13        std::cout << "The numbers are equal." << std::endl;
14    } else {
15        std::cout << "The numbers are not equal." << std::endl;
16    }
17
18    return 0;
19 }
20
```

OUTPUT

Enter the first integer:
Enter the second integer:
The numbers are not equal.

4.FLOATING POINT

Floating-Point

FLOATING-POINT

Write a program to read in two floating-point numbers and perform the following operations on them: addition, subtraction, multiplication, and division.

```
1 #include <iostream>
2
3 int main() {
4     double a, b;
5
6     std::cout << "Enter two numbers: ";
7     if (!(std::cin >> a >> b)) {
8         std::cout << "Invalid input.\n";
9         return 1;
10    }
11
12    std::cout << a << " + " << b << " = " << (a + b) << "\n";
13    std::cout << a << " - " << b << " = " << (a - b) << "\n";
14    std::cout << a << " * " << b << " = " << (a * b) << "\n";
15
16    if (b != 0) {
17        std::cout << a << " / " << b << " = " << (a / b) << "\n";
18    } else {
19        std::cout << "Division by zero is undefined.\n";
20    }
21}
```

OUTPUT

```
Enter two numbers: 5 + 10 = 15
5 - 10 = -5
5 * 10 = 50
5 / 10 = 0.5
```

5 10

5.EVEN-ODD

Even-Odd

EVEN-ODD

Write a program to read in an integer and determine if it is even or odd.

```
1 #include <iostream>
2 using namespace std;
3
4 int main() {
5     int num;
6     cout << "Enter an integer: ";
7     cin >> num;
8
9     if (num % 2 == 0) {
10        cout << num << " is even." << endl;
11    } else {
12        cout << num << " is odd." << endl;
13    }
14
15    return 0;
16 }
17
```

OUTPUT

```
Enter an integer: 6 is even.
```
